

MathPath AI™ is an AI-powered math-learning platform with a tutor built to teach *why* an answer is right — not just hand it over. It pairs a full math curriculum and a self-sustaining, independently verified question bank with tools for the tutors and teachers in a learner's corner. Live at mathpathai.com.

AT A GLANCE

Curriculum	27 lessons · 169 concepts · 4 subject areas	Subjects	Basic Math · Algebra · Geometry · Data & Statistics
Question bank	5,000+ AI-generated, independently verified	Verified accuracy	99.25% (independent statistical audit)
Difficulty	Foundational · Test Ready · Challenge	Built for	Students, and the tutors and teachers who guide them
Current scope	GED math now, SAT in progress — designed to be extensible	Access	Any device, any hour, year-round

WHAT MAKES IT DIFFERENT

Teaches understanding, not answers

The C²AI™ tutor is **Contextual** (it knows the lesson and the exact problem missed) and **Conceptual** (it builds the reasoning, never just reveals the answer).

A bank that maintains itself

Questions are generated, verified, and continually refreshed ahead of demand — no manual upkeep, always fresh.

FOUNDER

Tom Herring — founder of MathPath AI, LLC — holds an MS in Mathematical Statistics (Texas Tech) and is a longtime volunteer GED math tutor in Greenville, SC. A former software executive, he built MathPath AI to dismantle the "math wall" he watched determined adult learners hit again and again.

Independently verified questions

IVQG™ checks every question with **three AI models from two companies** — all must agree — before it is ever stored.

For the humans too

Tutors and teachers get classes, assignments, custom tests, and per-student progress insight — not just a solo study tool.
