

Not artificial — verified.

Most education tools are racing to put raw AI in front of learners — but raw AI is confidently wrong about math too often to trust with a student's progress. **MathPath AI is built differently.** Every question and explanation is proven correct by a layered orchestration of independent AI verifiers and deterministic math checks *before* a student ever sees it. It isn't artificial intelligence taken on faith — it's intelligence that's been **verified**. And because that verification happens once and is then reused by every learner, Verified Intelligence is not only more accurate — it's faster and dramatically cheaper to deliver than calling AI live.

Complete, classroom-ready, and built with independently verified AI you can trust. Every answer is checked by three independent AI systems and audited to 99%+ accuracy.

HOW VERIFIED INTELLIGENCE WORKS — THREE LAYERS, ONE SYSTEM

IVQG™ — Independently Verified Question Generation. Every question is checked by three independent AI models (from two different AI companies) *plus* deterministic, code-level math checks, and must pass before it is ever stored. No model grades its own work.

C²AI™ — Contextual, Conceptual AI. The tutor that teaches the *why*, not just the answer — grounded in the exact lesson and the student's specific mistake.

An orchestration & reuse layer. Verified content is generated once and reused by every student, so accuracy is built in and the cost of serving it stays near zero.

The intelligence is in the orchestration of many checks — not in any single model. That layered system is the core intellectual property.

THE SAME DESIGN THAT MAKES IT ACCURATE MAKES IT EFFICIENT

Generate once, serve forever

Verified a single time, then reused by every student — near-zero cost to serve again, instant to load, the same proven-correct version for everyone.

Let code check the math

Where an answer can be calculated, a deterministic engine confirms it — both free and more reliable than a second AI opinion.

Verify once, benefit always

Three-model agreement runs at creation and amortizes across unlimited uses — rigor too costly "per chat" becomes effectively free per student.

Look it up before generating

The AI Tutor draws from verified problem explanations first, calling fresh AI only for genuinely new student questions — fewer live calls, no loss of help.

The proof: 99%+ audited accuracy across 5,000+ questions — three AIs behind every answer. Try the AI Tutor free, no sign-up: mathpathai.com/meet-the-tutor
